# Hello, World!

## Introduction

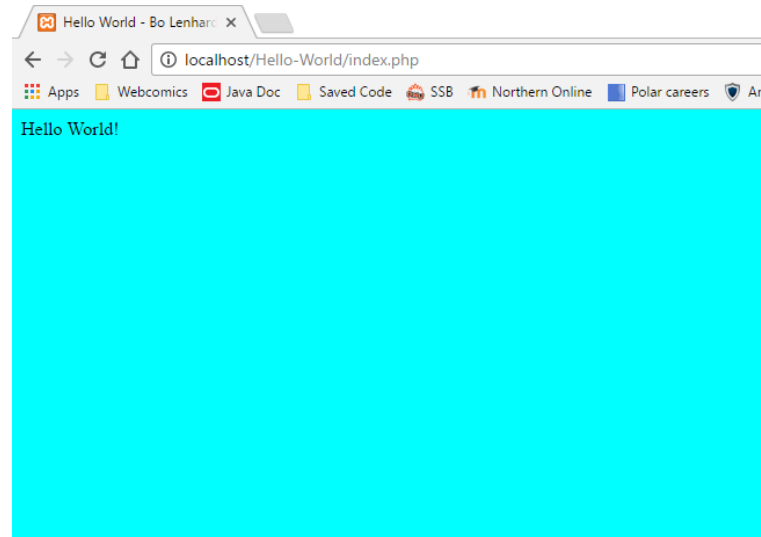

This is an overview of our first assignment, the classic Hello World application!

## Description

This program displays an extremely basic webpage that displays the text "Hello World!" with a chosen background color. It was intended as a simple first use of HTML and CSS coding.

## Conclusion

This was an extremely helpful first step into web design, although it will hopefully be a little more fun when we can add features and actual designs onto our webpages.

Code:

```
<html>
  <head>
    <link rel="stylesheet" href="HWSheet.css">
    <meta charset="UTF-8">
    Hello World!
    <title>Hello World - Bo Lenhardt</title>
  </head>
  <body>

  </body>
</html>
```

```
body
{
    background-color: cyan;
}
```
